

Stylus Pro 11.5 New Chart Features

Overview

Stylus Version 11.5 introduces new reporting chart features: Radar Charts and Step Charts. These charts will enable users to explore different and more creative graphics and visualizations.

What's New

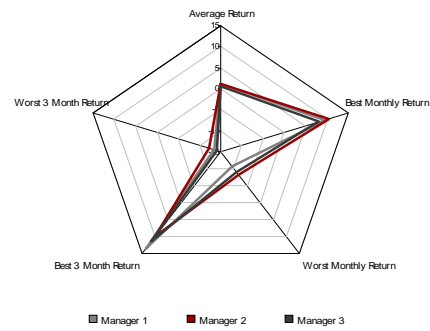

1. Radar Chart – a graphical method that shows the strengths and weaknesses by displaying multiple variables relative to the center point. Can be viewed similarly to a Style Map as the position of its corners are vital to its display.
2. Step Chart – uses vertical and horizontal lines to connect the data points in a series forming a step-like progression. The vertical parts of a Step chart denote changes in the data and their magnitude.

Benefits

- Improved visuals for understanding statistical measures
- Radar Chart – Provides a holistic view for multi-variate data assessment.
- Step Chart - In comparison to the standard Line Chart, the Step Chart has the ability to show changes that are rapid and occur at irregular intervals, clearly displaying the exact point in time in which changes occurred within a data set.
